

The use of stolen
credentials,
accounted for **50%**
of attacks in 2021

Use Better Passwords

Passwords are the gatekeepers to your most important information. Cyber attackers are opportunistic and can easily crack a weak password.

1. Use a passphrase: a string of random words that form a sentence.
2. Make sure the passphrase is at least 15 characters.
3. Don't use the same passphrase twice.
